
Weights ablation — MMRI rankings are robust to defensible re-weighting of (α, β, γ) and (w_i)
(a) Coverage-weight ablation (α, β, γ) — rank order preserved (Spearman $\rho \geq 0.99$)
equal (baseline, ρ = 1.000)
Presence-heavy (ρ = 0.994)
Specificity-heavy (ρ = 0.992)
Quantification-heavy (ρ = 0.988)
MMRI per report
mean MMRI across 20 reports:
equal 0.172
Presence-heavy 0.147
Specificity-heavy 0.158
Quantification-heavy 0.211

20 reports, ordered by equal-weight MMRI (left = best disclosure)
(b) Topic-weight ablation (w_i) — rank order preserved (Spearman $\rho \geq 0.95$)
equal (baseline, ρ = 1.000)
severity-weighted (ρ = 0.979)
inverse-coverage (ρ = 0.949)
MMRI per report
mean MMRI across 20 reports:
equal 0.172
severity-weighted 0.181
inverse-coverage 0.178
20 reports, ordered by equal-weight MMRI (left = best disclosure)
